- Micron Filter
- Thermal Pane Tempered Glass
- "Algae Guard" Glass Bottom
- Algae Deterrent Design
- Low Profile Casters
- 316 Stainless Custom Cascades
- Ultraviolet Sterilizer
- Dual Pumps

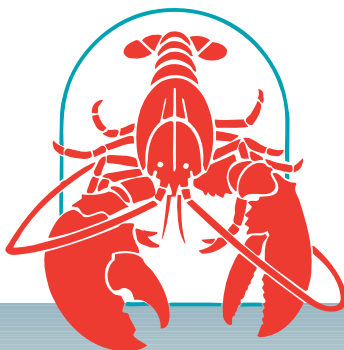

The Cascade Series lobster holding system is an attractive addition to any restaurant foyer. The Cascade Series increases live product visibility and provides the gentle sound of moving water. It is captivating to the eye and has a positive effect on lobster sales.

Choose from hundreds of custom laminates or wood trims for the cabinet (prices may vary). This system includes: 316 stainless steel curved top rail, thermal pane tempered glass side walls, removable dividers, and Sea Water Visions' unique "Algae Guard" glass bottom which leaves little surface area for unsightly algae growth.

Clean and biologically healthy water is maintained by the use of an advanced filtration system. The aerated sump houses the biological filter and activated carbon. The ultraviolet sterilizer kills algae, protozoa and other harmful bacteria. The micron filter removes all visible particles that may be floating in the water.

The Cascade Series also includes convenient access doors to all filters and equipment which eliminates the need to disturb or remove live product during maintenance. The two circulating pumps supply water to the stainless steel cascades which adds additional oxygen to the system, while creating the pleasant sound of falling water.
